Product Support

Price of this service is included in price of product itself

Product technical support is a service dedicated for ComAp customers and partners, which helps them with troubleshooting of ComAp products - configuration and monitoring tools, controllers, remote displays, accessories, remote communication, monitoring and controller functions setting to make usage easier and more comfortable.

It is provided either through e-mail, phone, computer or in special cases, also in person.

Phone and e-mail support is available 24 hours on working days with expedited response of phone requests and 24-hour response time for email requests. More details regarding support availability within particular regions can be found at www.comap-control.com.

Product Support includes:

- Solving and troubleshooting of customer SW and HW issues (incl. communication issues)
- Product setting and configuration assistance, guidance and consultation
- Product firmware and archive/configuration upgrades guidance
- Recommendation of product standard setting and configuration
- Recommendations for standard installation, connection and wiring
- Assistance with monitoring and remote communication settings
- Consultation of application and respective control system suitability
- Help and assistance with solution search
- Provision of documentation, software, installation packages, CAD drawings and other files
- Administration and management of passwords and activation codes
- Warranty claims guidance
- Features behavior and potential bugs testing and verification
- Providing feedback on product features to Marketing and R&D team

Product Support does not include:

- Any other services unrelated to ComAp products or their interface
- Solving and troubleshooting of 3rd party issues not related to ComAp products or their interface
- Troubleshooting non-component failure issues i.e. external influences outside of specified operating conditions causing units to fail
- Any Additional Services (particular solutions) specified in the next section
- "Commissioning" over the phone

Additional Services

To be charged according respective price list service price

Additional Services are delivered separately (not as a part of whole project). They are complementary services to basic product support bringing additional value to a particular solution that is not part of the whole project, or complete solution and is requested separately or beyond the originally agreed scope of project. The availability of particular additional services depends on the capabilities and strategy of the local ComAp office. We also expect that supplier of complete solution is responsible for overall functionality of the system.

Job Site Service and Solution work

- Consultation, Startup and Commissioning
- Installation of ComAp Components
- Site Review / Inspection
- Revisions
